Question 4

Question 4 (10 points)

- Write a script to automatically derive the geographic coordinates for the following addresses:
  - 1844 SW Morrison St, Portland, OR 97205
  - 800 Occidental Ave S, Seattle, WA 98134
  - 1001 Stadium Dr, Inglewood, CA 90301
  - 2700 Martin Luther King Jr Blvd, Eugene, OR 97401

You can **either** find each one individually **or** make a list of the addresses and use a for loop.

- Plot the coordinates of these addresses on an interactive map using `folium`

In [52]:
```
location_4 = ['1844 SW Morrison St, Portland, OR 97205', '800 Occidental Ave
coordinates_4 = []
# Loop through every ski resort to find it's coordinates
for loc_4 in location_4:

    # Define URL to search in Google Maps and add 'Oregon' in for good measu
    url = 'https://www.google.com/maps/place/' + loc_4

    # Import web driver and search for ski resorts
    driver = webdriver.Chrome(service=Service(ChromeDriverManager().install(
    driver.get(url)

    # Click search
    element = WebDriverWait(driver, 20).until(EC.element_to_be_clickable((By
    element.click()

    # Make the web driver wait until the URL updates (i.e. contains the @ si
    WebDriverWait(driver, 20).until(EC.url_contains("@"))

    # Retrieve the URL
    link = driver.current_url

    # Split string
    lat, lon = link.rsplit('@', 1)[1].rsplit(',', 1)[0].rsplit(',', 1)

    # Append to list
    coordinates_4.append((lat, lon))

    # Close driver
    driver.close()
```

```
